

# OSBORNE & LITTLE

NEW COLLECTIONS – SPRING 2023

RHAPSODY FABRICS • RHAPSODY WALLPAPERS • VIVIANA • REGENCY STRIPE • FOULARD SILK  
• ATACAMA • KANOKO CORK • LAVENHAM • PISA STRIPES • SAMBURU

Nature is an enduring source of inspiration for Osborne & Little, drawing on its colours, textures and infinite patterns and motifs. The O&L spring 2023 collections offer a wonderful array of fabrics and wallpapers that reflect the current desire to bring the positive and calming elements of the outdoors into our homes.

COLONNATO

The **RHAPSODY** collection transports you to a tranquil lake viewed from a colonnaded terrace and to the banks of a colourful lily pond. Kingfishers, lapwings and avocets, along with aquatic grasses, water irises and decorative fruits all provide further inspiration for this season's prints, embroideries and wallpapers. The beauty and simplicity of organic structures also offer design ideas for plain and semi-plain weaves, such as **FOULARD SILK** featuring a delicate fern leaf.

FOULARD SILK

ELYSIUM MURAL

HALCYON

CHROMATICA

PUZZLEWOOD

Playful and unexpected colour combinations are presented in the **VIVIANA** collection. The geometric patterns are realised in cut and un-cut velvet in cool shades mixed with warm tones, or soft pastels with bright hues. Colours such as blush, melon, amber and sage provide harmonious accents to leaf greens, charcoal and ginger.

The colour choices for 2023 span nature's broad spectrum to include warm and moody tones such as terracotta and copper, to soft and vibrant hues of blues and greens, and uplifting shades of gold and azalea. The palette lends itself to handcrafted embroidery techniques and beautifully complements natural materials such as linen, cotton and wool.

ELODIE

FAVO

ATACAMA

As nature inspires current trends, soft and natural textures continue to be popular, **ATACAMA** features a wonderful variety of bouclé, velvet and fringe fabrics offering a sense of comfort and luxury. And **KANOKO CORK** brings a warm material and nature's unique patterns direct to our walls.
